GLYCOLIPIDS).

FUNCTION: PLAYS AN IMPORTANT ROLE IN ACUTE CELLULAR ALLOGRAFT PUNCTION.

REJECTION AND PROBABLY ALSO IN XENOGRAFT REJECTION.

SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

SIMILARITY: OOTHER SELECTINS/LECAMS.

SIMILARITY: CONTAINS 1 C-TYPE LECTIN FAMILY DOMAIN.

SIMILARITY: CONTAINS 1 EGF-LIKE DOMAIN.

SIMILARITY: CONTAINS 4 SUBJECTION FEBREATS; PORCINE E-LECTIN LACKS

ALTERNATIVE PRODUCTS: TWO FORMS OF DAF (DAF-2, SHOWN HERE, AND DAF-1) ARE PRODUCED BY ALTERNATIVE SPLICING OF THE SAME GENE. DOMAIN: THE FIRST SUSHI DOMAIN (SCR1) IS NOT NECESSARY FOR FUNCTION. SCR2 AND SCR4 PROVIDE THE PROPER CONFORMATION FOR THE ACTIVE SITE ON SCR3 (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SUBUNIT: MONOMER (MAJOR FORM) AND NON-DISULFIDE-LINKED, COVALENT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        INTERFERES WITH THEIR ABILITY TO CATALYZE THE CONVERSION OF C2 AND FACTOR B TO ENZYMATICALLY ACTIVE C2A AND BB AND THEREBY PREVENTS THE FORMATION OF C4B2A AND C3BBB, THE AMPLIFICATION CONVERTASES OF THE COMPLEMENT CASCADE (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     FUNCTION: THIS PROTEIN RECOGNIZES C4B AND C3B FRAGMENTS THAT CONDENSE WITH CELL-SURFACE HYDROXYL OR AMINO GROUPS WHEN NASCENT C4B AND C3B ARE LOCALLY GENERATED DURING C4 AND C3 ACTIVATION. INTERACTION OF DAF WITH CELL-ASSOCIATED C4B AND C3B POLYPEPTIDES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SWISS-PROT entry is copyright. RL EUI. J. Immunol. 22:1513-1518(1992).

CC -i.FUNCTION: MCP IS AN IMPORTANT MEMBRANE PROTEIN FOR PROTECTING HOST CELLS FROM DAMAGE BY COMPLEMENT. MCP POSSESSES COFACTOR ACTIVITY FOR INACTIVATION OF C3B AND C4B BY SERUM FACTOR I. THIS WOULD CLOW MCP TO REGULATE THE COMPLEMENT SYSTEM AT THE LEVEL OF THE C3 CONVERTAGES. MAY BE INVOLVED IN THE FUSION OF THE SPERMATOGOA WITH THE OCCYTE DURING FERTILIZATION. MAY ACT BY PREVENTING COMPLEMENT CC CONVERTAGES. MAY BE INVOLVED IN THE FUSION OF THE SPERMATOGOA WITH CC SYNCYICOTROPHOBLAST LAVER OF PLACENTA.

CC -I. SUBCELLULAR LOCATION: TYPE I MEMBRANE PRODUCED BY ALTERNATIVE SPILICING. THE FORM SHOWN IS THE TRANSCRIPT A. "CDNA structure of murine C4b-binding protein, a regulatory component of the serum complement system.",

if the serum complement system.",

Biochemistry 26:4668-4674(1987).

11 FUNCTION: C4BP CONTROLS THE CLASSICAL PATHWAY OF COMPLEMENT ACTIVATION IT BINDS AS A COFACTOR TO C3B/C4B INACTIVATOR (C3BINA), WHICH THEN HYDROLYZES THE COMPLEMENT FRAGMENT C4B. IT (C3BINA), WHICH THEN HYDROLYZES THE COMPLEMENT FRAGMENT C4B. IT ALSO ACCELERATES THE DEGRADATION OF THE C4BC2A COMPLEX (C3COMPUTANTS) BINDS C4B. IT INTERACTS ALSO WITH SERUM AMYLOID P COMPONENT.

11 SUBUNIT: HOMOHEPTAMER; NOT COVALENTLY LINKED. MOUSE LACKS THE

     Treating or screening for cancer, e.g. renal or urogenital cancer - by modulating or detecting tumour associated human complement Factor H related antigen, or nucleic acid encoding it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This partial protein sequence represents a region of the human tumour associated complement factor H (CFH). This sequence is used in the identification of complement factor H related proteins and antigens isolated from clone pRBB9FH410 (see W39155). The detection of such proteins and a CFH antigens can be used in screening or for the treatment of renal or urogenital cancer, e.g. bladder, cervical or prostate cancer. Agents that may modulate this antigen could be used in the manufacture of a medicament for the treatment of a tumour cell.
                                                                                                                       Enfield DL,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This partial protein is found in clone pRRB9FH410 and represents a complement factor H related protein with homology to a region of the human tumour-associated complement factor H (CFH). The detection of this protein and a CFH antigen can be used in screening or for the treatment of renal or urogenital cancer, e.g. bladder, cervical or prostate cancer. Agents that may modulate this antigen could be used in the manufacture of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        obtained following PCR amplification. The protein is a monomer containing 8 SCRs. Each SCR forms a looped domain due to the presence of two intradomain disulphide bonds (only the disulphide bonds of SCR8 are labelled in the Features Table). Within each SCR the first cysteine residue bonds with the fraction. This secondary structure is responsible for the conformational flexibility of the Calp monomer. The invention covers fusion proteins in which the monomer sequence, or a specified subfragment of it, e.g. having 5, 4, 3 or 1 SCR(s) is fused to the C-terminal of a protein such as a viral receptor, cell ligand, a bacterial, viral or parasitic immunogen, enzyme, cytokine, toxin, etc. See also 013243-51.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New C4 binding protein fusion proteins and DNA encoding them -
comprise assemblies of C4bp monomers linked to functional moiety,
e.g. AZT, useful as delivery vehicles in diagnosis and therapy

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  immune system disorders, neurodegeneration and infections. Hyperacute rejection may also be prevented by treating the graft with SPICE before transplanting it or by using a xenograft that has been transformed to express SPICE from a gene therapy vector. SPICE is also useful as additive to blood, e.g. in an extracorporeal circulation system (coated on tubing) or in storage, also for studying complement activation. Transgenic animals that express SPICE are used as sources of xenografts. The present sequence represents a vaccinia complement control protein (VCP) encoded by the specifically claimed mutated VCP nucleotide sequence, having a silent T to A transversion at nucleotide position
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (UYJO)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              disorders, especially hyperacute rejection, inflammation or post-
ischaemic reperfusion injury, malignancies, autoimmune diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes the Vaccinia virus smallpox inhibitor of complement enzymes (SPICE) protein. SPICE is an inhibitor of complement activation, and so can be used to treat or prevent complement-mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 15; Fig 1; 88pp; English.

                                                                                                                                                                                                                                                                                                                                     length human CRI as expressed on erythrocytes. The CRI function in vivo may be mediated through the inhibition of complement pathway enzymes. The soluble CRI protein exhibits a complement regulatory activity, and this may be used to prevent reperfusion injury, inhibit Arthus reaction, and neutrophil mediated tissue damage, and reduce myocardial infarct size, and inflammation. The CRI protein and its fragments can also be used in the treatment of conditions which involve unwanted complement activity, e.g. shock lung, tissue damage due to burn, or ischemic heart conditions,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         06-DEC-1974;

The CR1 function in vivo
                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                      and autoimmune disorders. CRI proteins, analogues, derivatives, and anti-
CRI antibodies are used in assays, and diagnostics. The present sequence
represents the short consensus repeat (SCR) fragments of human CRI
protein long homologous repeat (LHR)-A sequence.

The CDNA clone designated CR1-4 was described in J.Exp.Med.(1988) 168:1255-1270. It encodes the first 8 and a half amino terminal SCRs of CR1. The invention concerns analogues of "regulator of complement activation" proteins or truncated, hybrid or recombinant forms of them. CR1-4 is a preferred truncated form and a number of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          specified substitution variants of it are claimed in which certain positions in SCR-2 which have been identified as important for the degree of C3b- and C4b-binding are substituted by amino acids from the corresponding positions in SCR-9. The specification does not contain the CRI-4 sequence; the sequence given here was constructed from the full-length CRI amino acid sequence having GENESEQ accession number R11810 and descriptions in the disclosure.
                                                                                                                                                                                                                                                                               short consensus repeat; regulator of complement activation; C3b binding; C4b binding; human complement type 1 receptor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               specified substitution variants of it are claimed in which certain positions in SCR-1 which have been identified as important for the degree of C3b- and C4b-binding are substituted by amino acids from the corresponding positions in SCR-8. The specification does not contain the CR1-4 sequence; the sequence given here was constructed from the full-length CR1 amino acid sequence having GENESEO accession number R11810 and descriptions in the disclosure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The cDNA clone designated CR1-4 was described in J.Exp.Med.(1988) 168:1255-1270. It encodes the first 8 and a half amino terminal SCRs of CR1. The invention concerns analogues of regulator of complement activation" proteins or truncated, hybrid or recombinant forms of them. CR1-4 is a preferred truncated form and a number of
CR1-4 (318-321 RNPP) analogue

                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                  The cDNA clone designated CR1-4 was described in J.Exp.Med.(1988) 168:1255-1270. It encodes the first 8 and a half amino terminal SCRs of CR1. The invention concerns analogues of "regulator of complement activation" proteins or truncated, hybrid or recombinant forms of them. CR1-4 is a preferred truncated form and a number of specified substitution variants of it are disclosed in which certain
                                                                                                                                                                                                                    positions in SCR-5-6 are substituted by amino acids from the corresponding positions in SCRs which are involved in C3b- and C4b-binding. The substitution variant given here has increased C4b-binding. The specification does not contain the CRI-4 sequence; the sequence given here was constructed from the full-length CRI amino acid sequence having GENESEQ accession number R11810 and descriptions in the disclosure.
